

Admiralty Primary School
Primary 5 Science

Term 1&2 – Theme: Cycles

- Reproduction in Animals and Plants
- Cycles in Water

Essential Takeaways	Key Inquiry Questions
<ul style="list-style-type: none"> • There are repeated patterns of change around us. • Understanding cycles helps us to make predictions about events and processes around us. 	<ul style="list-style-type: none"> • What makes a cycle? • How does a cycle help us predict events and processes? • Why are cycles important to life?

Core Ideas	Practices	Values, Ethics and Attitudes
Reproduction in Animals & Plants		
<ul style="list-style-type: none"> • Recognise that a cell is a basic unit of life. • Show an understanding that living things reproduce to ensure continuity of their kind and that many characteristics of an organism are passed on from parents to offspring. • Describe processes in the sexual reproduction of flowering plants. <ul style="list-style-type: none"> - Pollination - Fertilisation (seed production) - Seed dispersal - Germination • Recognise the process of fertilisation in the sexual reproduction of humans. • Recognise the similarity in terms of fertilisation in the sexual reproduction of flowering plants and humans. 	<ul style="list-style-type: none"> • Investigate the ways in which plants reproduce. <ul style="list-style-type: none"> - Spores - Seeds 	<ul style="list-style-type: none"> • Show curiosity by questioning and exploring the surrounding plants and animals. • Show care and concern by being responsible towards plants and animals.

Cycles in Water

<ul style="list-style-type: none"> • Recognise that water can exist in three interchangeable states of matter. • Show an understanding of how water changes from one state to another. <ul style="list-style-type: none"> - Melting (solid to liquid) - Freezing (liquid to solid) - Boiling/Evaporation (liquid to gas) - Condensation (gas to liquid) • Show an understanding of the terms melting point of ice (or freezing point of water) and boiling point of water. • Show an understanding of the roles of evaporation and condensation in the water cycle. • Recognise the importance of the water cycle. • Recognise the importance of water to life processes. • Describe the impact of water pollution on Earth's water resources. 	<ul style="list-style-type: none"> • Compare water in 3 states. • Investigate the effect of heat gain or loss on the temperature and state of water. <ul style="list-style-type: none"> - When ice is heated, it melts and changes to water at 0°C. - When water is cooled, it freezes and changes to ice at 0°C. - When water is heated, it boils and changes to steam at 100°C. - When steam is cooled, it condenses to water. • Investigate the factors which affect the rate of evaporation. <ul style="list-style-type: none"> - Wind - Temperature - Exposed surface area 	<ul style="list-style-type: none"> • Show concern for water as a limited natural resource and be responsible in conserving.

Term 2 to 4 – **Theme: Systems**

- Human Respiratory and Circulatory Systems
- Photosynthesis (Theme: Energy)
- Electrical Systems
- Simple Series and Parallel Electric Circuits

Essential Takeaways	Key Inquiry Questions
<ul style="list-style-type: none"> • A system is made of different parts. Each part has its own unique function. • Different parts of a system influence and work together to perform function(s). 	<ul style="list-style-type: none"> • What is a system? • How do different parts/systems work together to perform function(s)? • Why is it important to understand how parts/systems work together?

Core Ideas	Practices	Values, Ethics and Attitudes
Human Respiratory and Circulatory Systems		
<ul style="list-style-type: none"> • Recognise that air is made up of gases such as nitrogen, carbon dioxide, oxygen and water vapour. • Identify the parts of the human respiratory (nose, windpipe, lungs) and circulatory systems (heart, blood, blood vessels) and describe their functions. • Recognise the integration of the different systems (digestive, respiratory and circulatory) in carrying out life processes. 	<ul style="list-style-type: none"> • Compare how plants, fish and humans take in oxygen and give out carbon dioxide. • Compare the ways in which substances are transported within plants and humans. <ul style="list-style-type: none"> - Plants: Tubes that transport food and water - Humans: Blood vessels that transport digested food, oxygen and carbon dioxide 	<ul style="list-style-type: none"> • Show objectivity by seeking data and information to validate observations and explanations about the human body.
Photosynthesis		
<ul style="list-style-type: none"> • Recognise that living things need energy from respiration to carry out life processes. • Recognise that the Sun is our primary source of energy (light and heat). • Differentiate between the ways in which plants and animals obtain energy. 	<ul style="list-style-type: none"> - Investigate the requirements (water, light energy and carbon dioxide) for photosynthesis (production of sugar and oxygen). 	<ul style="list-style-type: none"> • Show objectivity by using data and information to validate observations and explanations about photosynthesis.

Electrical Systems & Simple Series and Parallel Circuits

<ul style="list-style-type: none">• Recognise that an electric circuit consisting of an energy source (battery) and other circuit components (wire, bulb, switch) forms an electrical system.• Show an understanding that a closed circuit allows current to flow.• Identify electrical conductors and insulators.	<ul style="list-style-type: none">• Construct simple circuits from circuit diagrams.• Investigate the effect of some variables on the current in a circuit.<ul style="list-style-type: none">- Number of batteries (arranged in series)- Number of bulbs (arranged in series and parallel)	<ul style="list-style-type: none">• Show concern for the need to conserve and to have proper use and handling of electricity.
